

Web Services with Cocoa

Sam Soffes

Everyone's doing it

You know you want to

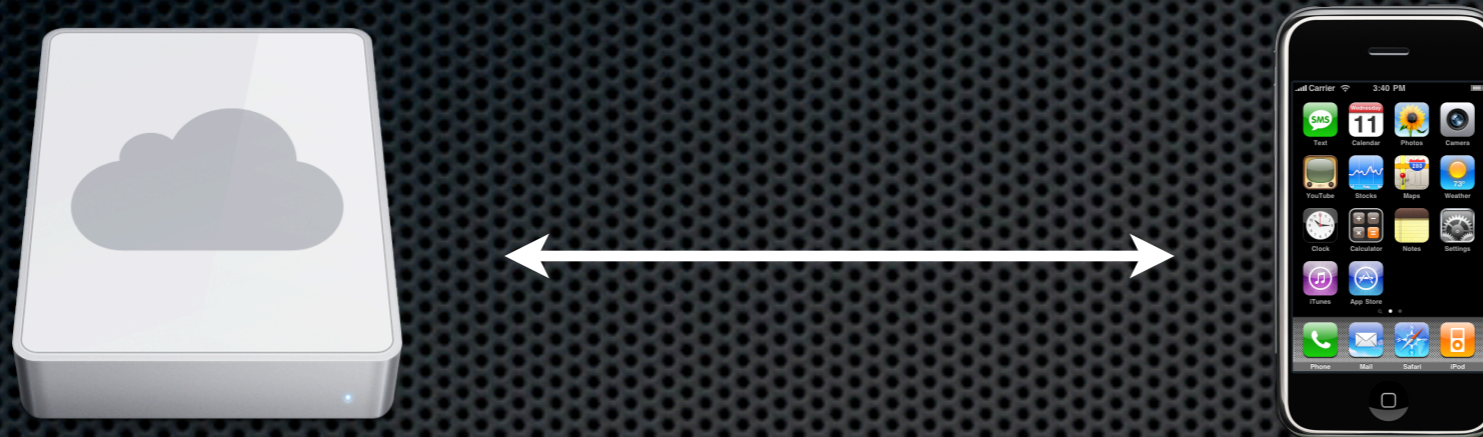

So what do I do?

Locate, eat, enjoy.

1. Connect to server

2. Transfer data

3. Parse data

- ✦ XML - Extensible Markup Language
- ✦ JSON - JavaScript Object Notation
- ✦ YAML - YAML Ain't a Markup Language
- ✦ Plist - Property List

What's a plist?

Magical, textual goodness

property list files are files that store serialized objects

NSString, NSNumber, NSDate,
NSData, NSArray, NSDictionary

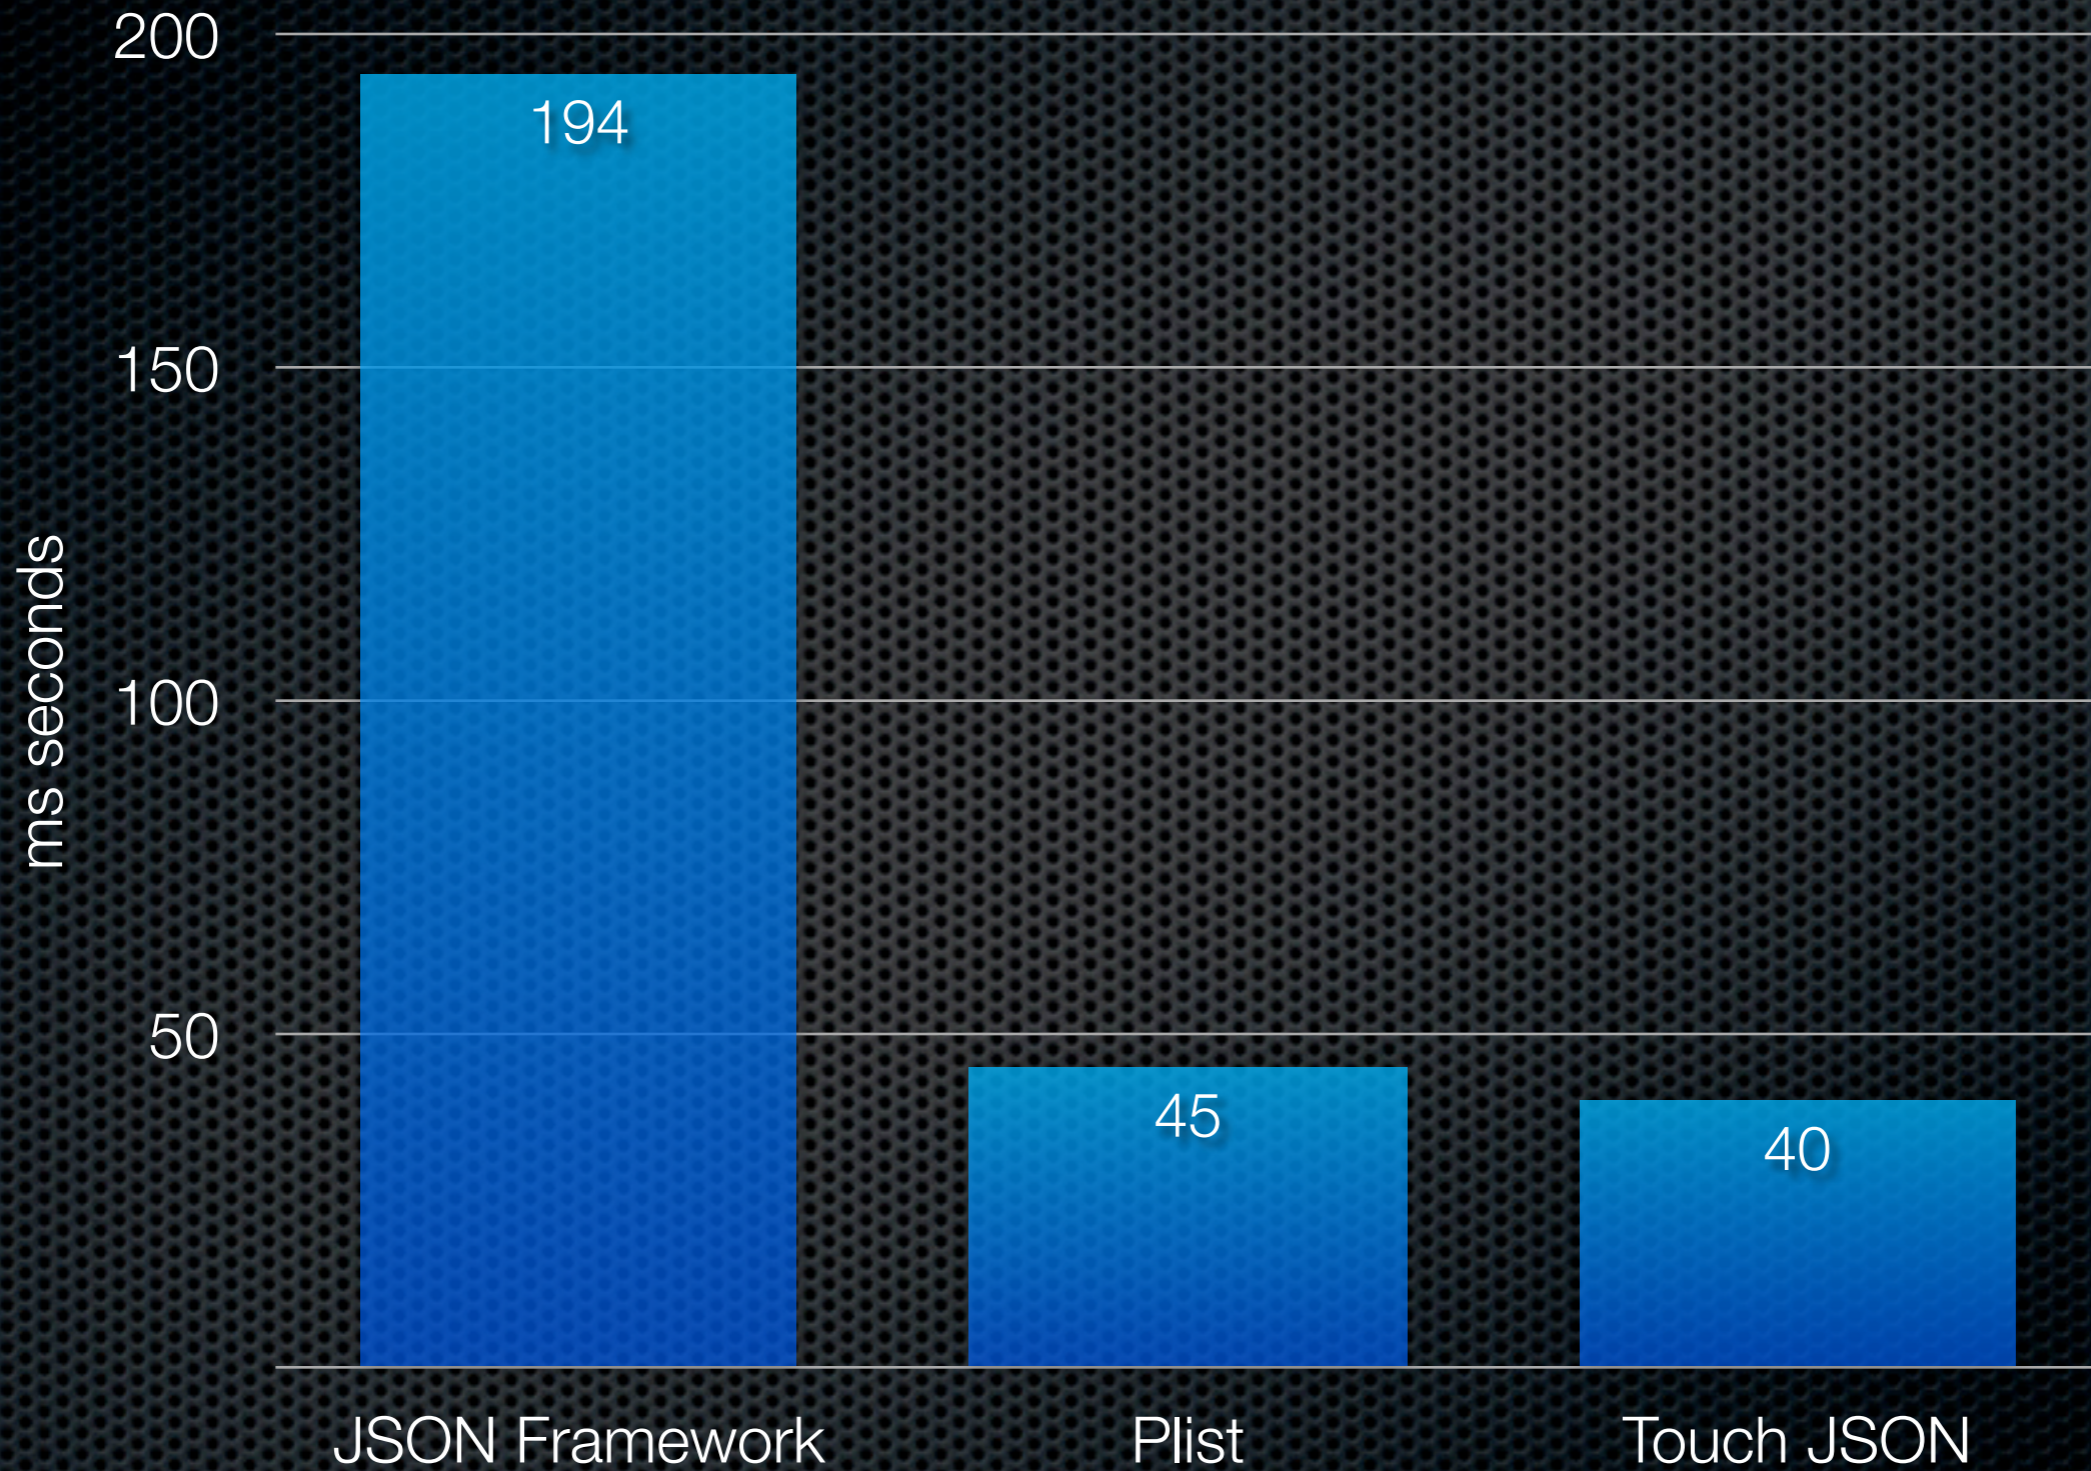

Transfer

Who's the smallest?

plist vs JSON

What's the best?

Now what?

NSURLConnection

SSCConnection

Data transfer made easy

Stuff to Check Out
